Position du problème et objectif(s) de l'étude:

Rezafungin (RZF) once weekly (QWk) is a next-generation echinocandin in development for treatment of candidemia and invasive candidiasis (IC) and prevention of invasive fungal disease caused by *Candida*, *Aspergillus*, and *Pneumocystis* spp. in BMT. RZF QWk was compared to caspofungin (CAS) QD in two double-blind, randomized, controlled trials of treatment of candidemia and/or IC: STRIVE (Phase 2, NCT02734862) and ReSTORE (NCT03667690).

Matériel et méthodes:

Trial data (Phase 2+Phase 3) were analyzed to evaluate outcomes stratified by renal function at baseline: CrCl \geq 60 mL/min (normal/mild impairment [Norm/Mild]) and <60 mL/min (moderate/severe impairment [Mod/Sev]).

Outcomes were evaluated for differences between CrCl categories and between treatment groups: RZF QWk 400mg on Wk 1 then 200 mg vs CAS QD 70 mg on Day (D)1 then 50mg, for \geq 14 days (\leq 4 Wks) w/optional oral fluconazole stepdown for CAS.

Résultats & Discussion:

- D30 all-cause mortality (ACM)
 - Mod/Sev: RZF, 13% (7/54); CAS, 30.5% (18/59)
 - Norm/Mild: RZF, 22.7% (17/75); CAS, 10.8% (9/83)
- Mycological eradication (ME) at D5
 - Mod/Sev: RZF, 75.9% (41/54); CAS, 61.0% (36/59)
 - Norm/Mild: RZF, 74.7% (56/75); CAS, 66.3% (55/83)
- ME at D14
 - Mod/Sev: RZF, 75.9% (41/54); CAS, 57.6% (34/59)
 - Norm/Mild: RZF, 69.3% (52/75); CAS, 74.7% (62/83)
- \geq 1 treatment-emergent AE
 - Mod/Sev: RZF, 93.2% (55/59); CAS, 88.9% (56/63)
 - Norm/Mild: RZF, 88.9% (72/81); CAS, 76.7% (69/90)

Conclusion:

RZF efficacy was comparable across CrCl categories, with higher ME and lower D30 ACM in Mod/Sev group. Further analyses are needed to evaluate the observed differences between treatment groups.
